

Flooding is possible: River Don at Fishlake Monday 18th January 2021

As Jenny Palmer has said:

“Last year, as you will be aware, our village suffered devastating flooding in November 2019. Having studied geography, ecology and agriculture at the Universities of Nottingham, Oxford and Lincoln respectively, I am familiar with environmental issues including flood risk, catchment-based solutions and climate change. When buying a house in Fishlake in March 2019 we therefore paid close attention to the EA's long term flood risk assessment for Fishlake - which at the time was very low risk - prior to our home purchase in March 2019.”

It is this flood defence that caused most of the damage in Fishlake, but some of the water came from the Ochre Dyke.
